LYNX MICRO SYSTEM

SWITCHING ADAPTER

REF: E070-0 17-05-08

INSTALLATION INSTRUCTIONS

The Headset Switching Adapter is used to switch-on a single Micro System headset.

Using the headset in this way allows the level of background noise to be set using the headset volume control and is useful to maintain some environmental feedback in certain applications.

NOTE:

The Switching Adapter is also useful for testing headsets and can be used to establish if individual headsets are charged and functioning correctly.

WARNING:

The connectors fitted to the headsets enable the leads to be locked together during flight. Always utilise the bayonet-locks to prevent accidental separation and always check that they are engaged before use.

When using a headset with a Switching Adapter in safety critical applications, always make sure that the headset is fully charged before use.

IMPORTANT

READ THIS INFORMATION CAREFULLY BEFORE
ATTEMPTING TO USE THIS ITEM OF EQUIPMENT
